Full-length practice directions

June 2026 public booklet with one new constructed-response task.

Name _____ **Date** _____

1. Open or print the complete NYSED booklet and the answer materials for this administration. Use the original diagrams or organizers wherever a response requires them. Use the reference materials specified in the booklet.

Open the public exam booklet **Answer booklets and reference links**

2. Work through the public booklet in order. When you reach question 36, substitute the practice insert on the next page for that response. Do every other question as printed. Keep any shared original stimulus available for surrounding questions.

3. Use the time allowance and materials printed on the public booklet, with local accommodations as applicable. Show your response to the replacement on this insert or a labeled sheet. Use the state answer materials for the remaining questions.

If you have seen the public form before, tell your teacher which questions you recognize. This assembled form is for local practice.

A tank drains

New material for the full-length practice assembly.

Name _____ **Date** _____

The volume remaining is V(t) = 8 + 64(0.75)^t liters, t hours after drainage starts. The monitor records values at whole hours.

Find the average rate of change from hour 0 through hour 2 and interpret it. Determine the first recorded hour when the volume is 25 liters or less. Justify the choice and explain the role of 8 in the model.
